BY DECENTRALIZED INTELLIGENCE LABS

“WAR IS 90% INFORMATION.” - NAPOLEON BONAPARTE

Decentralized Intelligence Labs:

Leveraging Web3 Solutions for Cybersecurity and Grand Strategy Consulting

Decentralized Intelligence Labs is a cutting-edge cyberdefense firm that specializes in utilizing Web3 solutions for cybersecurity and grand strategy consulting. Our mission is to empower businesses with the information they need to stay ahead in an increasingly complex digital landscape.

MARKET ANALYSIS

The cyberdefense industry is expected to experience robust growth, with a projected compound annual growth rate (CAGR) of 10.17% from 2020 to 2025. This rapid expansion is anticipated to bring the market valuation to \$289.8 billion by 2025. This growth is driven primarily by the increasing adoption of Internet of Things (IoT) devices and the rising threats from both state-sponsored and non-state malicious actors, highlighting the urgent need for enhanced security measures.

Demonstrating this clearly is the US Department of Defense's (DOD) budget proposal for 2021, which topped some whopping \$2.8 billion spread among its private information technology (IT) programs in its fiscal year. The DOD further intends to ramp up spending about \$9.7 billion on these programs between 2020 and 2022. These figures demonstrate the critical need for comprehensive cybersecurity solutions for the complex problems of the modern environment.

ARTEMIS DEFENSE NETWORKS

Artemis Defense Networks offer custom-built threat mapping and war games middleware specifically designed for any and all defense and security needs. These networks are built using a combination of cutting-edge peer-to-peer technologies, including artificial intelligence (AI), blockchain, and oracle networks, to provide unparalleled threat intelligence and situational awareness.

CAPABILITIES

Artemis Defense Networks are custom built firmware designed from a comprehensive set of features, including:

Advanced threat detection and identification capabilities, leveraging a combination of computer vision, pattern recognition, and other AI techniques.

Decentralized data sharing and recall: With our blockchain-based architecture and oracle networks, we enable secure and decentralized data sharing and collaboration among defense and security teams, allowing for real-time intelligence and response coordination.

Customizable alerts and notifications: Our networks offer customizable alerts and notifications, allowing users to receive real-time updates on potential threats and other critical events, no matter where they are.

Scalable and modular architecture: Our modular and scalable architecture allows us to tailor our solutions to meet the unique needs of each client, whether they're protecting critical infrastructure, managing borders, or conducting military operations.
